

Rogers Voice with Skype for Business On-Premises

Improve workforce productivity and replace your costly PBX

Cut the cord and achieve flexibility, cost-savings and security

The days of expensive legacy private branch exchanges (PBX) are coming to an end. Now you can provide your employees with a single number, whether they are at their desk or on the road, with Rogers Voice with Skype for Business. Combined with your choice of headset and smartphone, this solution is a perfect combination of flexibility, functionality and practical cost-savings that will move communications far beyond traditional phone system capabilities.

Realize the full potential of Enterprise-Grade unified communications

Lower Cost

Reduce travel costs and deployment complexity while Enterprise Voice & Collaboration capabilities are delivered seamlessly to your mobile workforce.

Custom Solutions

Rogers will design and deploy an efficient and comprehensive end-to-end Enterprise Voice & Collaboration solution.

Professional Services

Rogers Professional Services will accommodate your business and technology goals while enhancing or replacing your legacy PBX system.

Connectivity

Unleash the full speed and power of our Enterprise Class Microsoft Certified SIP Trunk.

We can help keep it simple, with end-to-end on-premises design and deployment of Rogers Voice with Skype for Business

Advanced Network Assessment

Ensure your wired and wireless networks are optimized and have the capabilities for a Rogers Voice with Skype for Business solution. Rogers will validate your network for real-time communications readiness and make recommendations for pilot and/or deployment.

High Availability

Real-time communications are mission-critical for business, and you should be comfortable knowing prearranged levels of operational performance will be met. We can optimize and validate Rogers Voice with Skype for Business's High Availability (HA) capabilities for your enterprise.

Disaster Recovery

Voice is a mission-critical service. Ensure your Rogers Voice with Skype for Business solution has site resiliency with Rogers Primary and Backup Wireless Connectivity solutions and survivable branch appliances.

Professional Services

Our team of professional services consultants can ensure your end-to-end solution is designed and deployed with expert resources. From the SIP Trunk to the mobile device and everything in between.

Rogers Voice with Skype for Business Optimized Wi-Fi

Rogers will configure an optimized Wi-Fi network to complement Skype for Business mobility allowing quality of service for voice traffic over Wi-Fi, ensuring the best overall experience.

Rogers Voice with Skype for Business Training

Rogers Professional Services can provide comprehensive training for your operations team.
