

Spend less time managing your IT infrastructure and more time driving business value

› Server Management Services

Get stability, cost control and innovation with Server Management Services from Rogers.

A reliable, robust IT infrastructure is no longer an option. It's a must. And an integral part of that infrastructure is ongoing server maintenance. Management needs stable platforms and cost control; yet they also want IT to innovate and help grow the business.

The everyday IT tasks of patching, monitoring, reviewing logs and adding resources are key to server stability, but these tasks are time consuming and can take up to 80 percent of your IT budget. That leaves only 20 percent to innovate and grow your business. Now you can achieve stability, cost control and spend more time on innovation.

Key Benefits:

Peace of Mind

Have confidence in your IT infrastructure, knowing it is running on a fully patched, monitored, managed and maintained platform 24x7.

Get Strategic

Let us help you manage key business functions so you can focus your limited IT resources on strategic priorities.

Predictable OPEX

For an affordable monthly rate, you have flexible solutions tailored to your exact needs, budgets and business requirements.

Control

Maintain visibility to your data through monthly server performance reports and a real-time dashboard in an easy-to-use portal.

Manage your servers the way you want with tiered offerings.

Self-Serve Monitoring & Alerting

Monitoring of server key components, threshold alerting, and reporting, with ad hoc support available for extra cost.

Proactive Monitoring/Patching/Reporting

Self-serve monitoring and alerting package, with automated OS patching.

Mobility Strategy Assessment & BYOD

Pro-active monitoring/patching/reporting package and all ad hoc support at no extra cost.

You have the assurance of a stable platform, the cost certainty of a fixed monthly rate and more time to spend on driving innovation and competitive advantage in your business.

Industry Certifications

Rogers is a Certified Partner on all hardware and software deployed in Rogers data centres.

We certify our data centres annually to ensure they meet the highest standards: PCI DSS, CSAE 3416 Type II compliances, SSAE 16 SOC 1 Type II, SOC2 Type2/3 and ISAE 3402 Type II compliant. We have three Uptime institute Tier III certified facilities with more to come.
